

## Featured-Bar Mod

### How To install

First open index.php and trending.php in your favorit editor

Then find this code here:

```
    $posts = $executequery2->getrows();  
}
```

After that add this code:

```
        $queryr = "SELECT A.*, B.username FROM posts A, members B WHERE  
A.USERID=B.USERID AND A.PID!='" .mysql_real_escape_string($pid)."' AND A.url=" AND  
A.active='1' ORDER BY rand() desc limit 5";  
        $executequeryr = $conn->execute($queryr);  
        $r = $executequeryr->getarray();  
        STemplate::assign('r',$r);
```

In style.css add the following code into the file at the end of it.. aka line 3..

```
.featurebar{  
background-color:#000;  
padding: 10px 0;  
width: 100%;  
  
}  
  
}  
.featurebar #entries-content{padding:5px}  
  
}  
.featurebar ul {  
overflow: hidden;  
margin: 0 auto;  
padding: 0;  
list-style-type: none;  
width: 1060px;  
}  
  
.featurebar ul a {  
float: left;  
margin: 50px;  
position: relative;  
width: 204px;  
height: 100px;  
overflow: hidden;  
margin-right: 10px;  
}  
.featurebar ul a:last-child {  
margin-right: 0;  
}  
  
.featurebar ul a img, .feature-bar ul a span.title {  
display: block;  
}
```

```
.featurebar ul a span.title {
    background-color: rgba(0,0,0,0.8);
    color: #fff;
    position: absolute;
    bottom: 0;
    left: 0;
    font-size: 13px;
    font-weight: bold;
    padding: 1px 1px;
    width: 230px;
    display: none;
}

.featurebar ul a:hover span.title {
    display: block;
}
```

Then open header.tpl and find

```
<script type="text/javascript">
$( '.search-button').click(function(){
    $('#header_searchbar').toggle('slow');
});
</script>
{/literal}
```

and then add the following code after:

```
<div class="featurebar">
<div id="entries-content" class="grid">

    {section name=i loop=$r}
    <ul id="grid-col-{if $smarty.section.i.iteration GT 2}2{else}1{/if}" class="col-{if
$smarty.section.i.iteration GT 2}{math equation="x - 2" x=$smarty.section.i.iteration}{else}
$smarty.section.i.iteration{/if}">
        <li class="">
            <a href="{ $baseurl}/gag/{ $r[i].PID}" class="jump_stop">
                <span class="title">{ $r[i].story|stripslashes|mb_truncate:100:"...":'UTF-8'}</span>

                <div style="" class="thimage">
                    {if $r[i].nsfw eq "1" AND $smarty.session.FILTER ne "0">{else}{/if}
                </div>
            </a>

        </li>
    </ul>
    {/section}
</div>
</div>
</div>
</div>
</div>
</div>
```

Save and upload all files

You should then get a random feature posts bar.
